Pene-Turf

Soil Conditioner

Biodegradable, Non-Flammable and Non-Corrosive

- Improves water penetration, enhances soil aeration and makes better use of applied water.
- For the treatment of compaction, crusting, poor drainage and reduces erosion
- Formulated especially for golf courses, athletic fields, parks, race track turf, football ovals, freeway verges and lawns (incl. instant turf)

COMPATABILITY: Pene-Turf is believed to be compatible with most liquid fertilisers, insecticides, fungicides, and pre-emergent herbicides. Do not mix Pene-Turf with chemicals that are known to be injurious to the seedling before emergence, or post emergence (selective) herbicides. A compatibility test should be carried out before mixing in the bulk spray vat.

NOTE:

- Pene-Turf is not recommended for the treatment of hydrophobic soils, sodic soils (salt degraded) or soils with a high water table.
- Never leave the cap off a full or partly used container.
- When Pene-Turf is mixed with liquid fertilisers, it can assist those fertilisers (particularly organic) to quickly reach the root zone.

DIRECTIONS FOR APPLICATION

Mix 600mls of Pene-Turf with water to cover uniformly 1 hectare (=60mls per 1000m²). The amount of water to be mixed with Pene-Turf will vary with the type of spraying equipment used. The turf must be moist at the time of application, irrigation soon after treatment will wash the Pene-Turf down through the grass to the soil surface. Follow up irrigation (approx. 50mm) within one month will further activate the Pene-Turf. If irrigation is not available, Pene-Turf may be boom sprayed during light rain. For best results apply Pene-Turf twice annually, with the exception of heavy traffic turf such as: bowling greens, golf greens and tees, race track or football turf, etc., where three applications are recommended. Pene-Turf may be applied via a spray irrigation system fitted with a metering pump. Detailed leaflets are available on request.
